

The Kronos and Zonar Systems Partnership

Kronos® and Zonar Systems announced our partnership August 27, 2008. This partnership links a leading provider of electronic fleet management technology with the leader in workforce management solutions. It also brings substantial benefits to our joint customers in K-12 pupil transportation, in commercial and private trucking, and to refuse and concrete truck operators.

Seattle-based Zonar Systems (www.zonarsystems.com) is the recognized leader in innovative GPS and verified visual inspection technologies, helping companies capture, communicate, and analyze information about the location and condition of their vehicles and other assets. Its products incorporate handheld computers, web-based applications, Global Positioning System (GPS) technology, radio frequency identification (RFID), wireless communication, and other telematics solutions.

- **Fleet Utilization** – Zonar’s HD-GPS system delivers unmatched fleet intelligence by collecting more data, more frequently, with unprecedented data accuracy, giving you more actionable data.
- **Safety and Compliance** – Zonar’s patented Electronic Vehicle Inspection System helps ensure that pre- and post-trip inspections are conducted frequently and efficiently, providing peace of mind for fleet operators.
- **Fuel and Emissions Savings** – The Fuel and Emissions module embedded in Zonar’s web-based application, Ground Traffic Control, helps ensure that vehicle operators are minimizing idle times, lowering fuel costs and environmental footprints.

Real-time mobile data collection presents a critical challenge in the industries we target together with Zonar. With this relationship, time stamps and data on vehicle inspection details from Zonar’s EVIR System and 2010 Handheld RFID Reader will be integrated into our Workforce Central® suite via GSM

cell technology. Through this integration, end users will be able to view time and attendance information in real time for their mobile workforces and gain accurate insights into vehicle inspection details. This will enable faster and improved business decisions for enhanced productivity. In addition, tracking for special labor activities is delivered for more accurate special pay calculations and labor allocations.

If you have an account with one of the targeted industries that is either a Zonar customer or in one that could benefit from our partnership, contact Barry Fisk to engage the Zonar sales team. For details on the integration or for technical details, contact Jerry Nepon-Sixt.
