

GPS Bundle for Safer and More Efficient School Bus Transportation Management

Seamless solution for integrating GPS into your school bus routing software.

A TRANSFINDER/ZONAR SYSTEMS INTEGRATED SOLUTION.

Analyzing real-time GPS data with your planned routes enables you to compare actual driving paths with your planned routes.

In partnership with Zonar Systems, Transfinder offers you an exclusive RouteTracer GPS Bundle that integrates the K12 from Zonar with Busfinder AVL software from Transfinder to display actual and historical bus locations and path-points on your routing map.

With this integrated solution, you can:

- See that your buses are where they are supposed to be;
- Associate a driver to a vehicle;
- Pinpoint speed at a given time;
- Locate a vehicle in real time;
- Easily analyze and adjust driving paths and stop times;
- Reduce your district's carbon footprint by monitoring idle times; and
- Increase overall fuel efficiency and reduce costs.

The powerful RouteTracer GPS Bundle is designed exclusively for school bus transportation challenges.

Contact us to learn how RouteTracer can make your transportation operation safer, more efficient, and more cost-effective.
