

# ZONAR COACH™

## Driver Training Reimagined

**MAXIMIZE**

driver  
performance

**PROTECT**

drivers  
and fleets

**MITIGATE**

safety  
risk

**CAPTURE**

video of  
events

### Real-time, In-cab Safety Coaching

Zonar Coach™ is an advanced driver-assistance system (ADAS) that provides real-time audible warnings so drivers can take corrective action when they exceed posted speed limits, roll through stop signs, tailgate, brake too hard, corner too fast or rapidly accelerate. The Coach approach is different than competing solutions because we provide the drivers with an opportunity to correct their action immediately after the audible warning before an incident is recorded or applied against their daily scorecard.

### Contextual Evidence

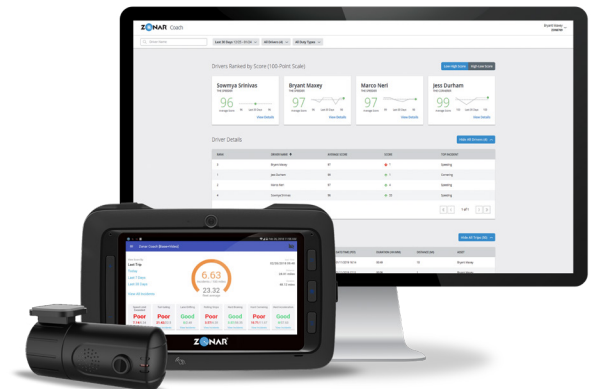

Zonar Coach uses a forward-facing camera with computer vision and advanced machine learning algorithms to recognize driver behavior, provide real-time coaching and enable performance scoring. It captures key events, which can be reviewed to see what about the driver's behavior could be improved. And, in the event of an incident, it can help defend against fraudulent claims.

### Driver Focused

Enable drivers to proactively monitor their own performance with an easy-to-use dashboard on the Zonar Connect™ tablet. Drivers can monitor their improvements and see how they benchmark against the fleet. Managers have their own web portal to monitor drivers and fleet performance, with tools to customize scoring thresholds and analyze trends.

### Connect Your Operation

Optimize Coach by leveraging Zonar's other fleet management solutions to digitize your operation in one comprehensive platform.

### Features and Capabilities

- Real-time audible coaching
- Event-based driver scorecard
- Visual analytics and G-sensor based event detection with warning audible sensors
- Video and photographic evidence of incidents for driver accountability and exoneration
- Mapped location of incidents
- Trip summary reports
- Admin web portal
- 24/7/365 U.S.-based customer care
