

Stop-By-Stop Rider Verification and Route Exception Management

Student Safety On A Whole New Level

Catch passenger “wrong bus and wrong stop” incidents before they become a safety concern—or turn into a frantic parent phone call. [Verify](#) is a mobile app that provides innovative, next-level passenger safety and visibility, enabled by [Z Pass™](#), Zonar’s RFID student tracking solution. As students scan their Z Pass card upon entry and exit from the bus, Verify automatically confirms the right student, right bus, right stop. Verify alerts the bus driver—both visually and audibly—of exceptions, so corrective action can be taken immediately. Stop-by-stop passenger manifests are auto-activated and visible to drivers upon arrival at each stop for easy and intuitive visual verification and exception management.

Simple and Effective Bus, Driver and Route Management

No more whiteboards necessary to manage daily bus and driver exceptions with [RouteBoard™](#), Verify’s online management portal. Update “day-of” changes quickly and easily, with route updates pushed directly to the Verify mobile app. Review and analyze alerts and rider exceptions. Obtain greater insight into current and historical rider activity, as well as bus, stop and route utilization for reimbursement and routing accuracy improvements.

Features and Functions

- Verify the right student, right bus, right stop
- Review stop-by-stop and full-route passenger manifests
- Manage real-time rider exceptions
- Receive visible and audible rider exception alerts
- Prompt required child check after every route
- Manage “day-of” changes
- Download daily routing information automatically
- Export historical alert data, actual stop geolocation and times
